**STATE SCHOOLS CHIEF DELAINE EASTIN  
RELEASES SCHOOL SAFETY REPORT FOR 1999-2000**

SACRAMENTO—State Superintendent of Public Instruction Delaine Eastin today released the results for the fifth annual California Safe Schools Assessment, 1999-2000.

Data collected from California public schools show that crime rates increased over the preceding year in three out of four California Safe Schools Assessment (CSSA) crime categories: Crimes Against Persons, Drug and Alcohol Offenses, and Property Crimes. A portion of this increase, however, is due to improved reporting, particularly for the drug and alcohol category.

Caution should be exercised when drawing conclusions from the percentage of change in individual crime categories. Because the crime rates are very low (most rates are less than 0.5 per 1,000 students), the percentage of change tends to overemphasize the change between years.

The fourth category, Other Crimes, had an overall 14 percent decrease, including a 12 percent decrease in the number of weapons found on campus, a 40 percent decrease in the number of bomb threats, and an 18 percent decrease in the number of loitering and trespassing incidents.

These past five years of data collection are providing valuable objective information on which to identify crime trends and to develop appropriate programs, tactics, and strategies for combating crime on school campuses.

“While our schools continue to be extremely safe havens for the overwhelming number of our students, the CSSA results show that we need to enhance efforts within

our communities to set and enforce clear behavior standards that promote responsible student conduct,” Eastin said.

Added emphasis also must be placed on supporting conflict resolution programs, increasing student involvement, curtailing the use of alcohol and other drugs, and focusing attention on campus security measures, she said.

“Schools play an important role in violence prevention, but they can’t do it all,” Eastin said. “School-based programs work best when supported by community efforts, especially a clear, consistent message about appropriate student behavior. Non-violent problem-solving needs to be the norm – not the exception.”

The CSSA data show a 17 percent rise in the crime rate (from 4.02 incidents per 1,000 students to 4.70 incidents) for Crimes Against Persons. Battery remains the crime with the highest rate (from 3.28 incidents per 1,000 students to 3.88 incidents).

Drug and Alcohol Offenses increased slightly (2 percent or from 3.94 incidents per 1,000 students to 4.03 incidents), although some of this increase is a result of improved reporting methods, not an actual increase in crime.

The crime rate for Property Crimes on school campuses rose 8 percent for theft and 5 percent for vandalism and graffiti, while the dollar loss as a result of Property Crimes dropped \$1.5 million from the prior year to nearly \$24 million.

The 14 percent decline in the statewide crime rate for the fourth category, Other Crimes, shows a 12 percent reduction in weapon possession for 1999-2000, a drop due primarily to the fewer number of firearms (510) and knives (5,363) found on campus. This category also saw corresponding decreases in crime rates for loitering/trespassing (down 18 percent), destructive/explosive devices (down 10 percent), and bomb threats (down 40 percent) after an extremely high number in the previous year due to pranks following the Columbine High School incident.

The statewide data show the classifications of victims and known suspects remained relatively stable during the five years: males comprised 68 percent of the victims and 81 percent of known suspects. These findings also show that teachers or other staff members were rarely (6 percent) the victims of campus crimes.

“Schools have additional resources to engage communities in a safe school planning process. We urge schools to develop partnerships with law enforcement and

other community agencies and together they can select effective safety and prevention programs and strategies,” Eastin said.

“Candidly, we would all rather focus our full attention to the academic side of student achievement, but safety is important in ensuring that all students have an environment in which to learn optimally,” she said. “We thank the Governor and the Legislature for the additional resources they provided for school safety measures after the Columbine tragedy. At the same time, California remains last in the number of school counselors per student and we need to fix that.”

The CSSA report contains a comprehensive list of resources that can provide information and support. One of the newest resources is Classroom Management: A California Resource Guide for Teachers and Administrators of Elementary and Secondary Schools sponsored by the California Department of Education (CDE).

In addition, free technical assistance and information is available through the School/Law Enforcement Partnership Cadre, which consists of school safety experts from education and law enforcement. All school districts and county offices of education in California are eligible to receive federal funds under the Safe and Drug-Free Schools and Communities Act. The California Healthy Kids Program Dissemination Center also offers information and technical assistance. Grants are available from the CDE’s Safe Schools and Violence Prevention Office to fund activities promoting conflict resolution and student involvement and other programs.

CSSA is administered by a partnership consisting of the CDE, the Butte County Office of Education, and Duerr Evaluation Resources, a private evaluation firm.

To assist schools in collecting and reporting school crime data, CSSA conducted 16 workshops in different regions of the state in 1999-2000, serving 654 individuals in basic training sessions. In addition, CSSA conducted individualized on-site training sessions for more than 1,000 school staff who may not have been able to attend the regional training.

Complete statewide, county and district crime data are available on the CDE Web site at <http://www.cde.ca.gov/spbranch/safety> beginning at 9:00 a.m. Wednesday, February 28.

## Publishing Information

---

The *California Safe Schools Assessment 1999-2000 Results* was developed by California Safe Schools Assessment (CSSA), which is a partnership of Butte County Office of Education, Duerr Evaluation Resources, and the California Department of Education. This publication was edited by Chris Graillat, working in cooperation with Jean Scott and Jerry Hardenburg, Consultants, Safe Schools and Violence Prevention Office. It was designed and prepared for printing by the staff of CDE Press, with the cover and interior design created and prepared by Paul Lee and Juan Sanchez. Typesetting was done by Carey Johnson. It was published by the Department of Education, 721 Capitol Mall, Sacramento, California (mailing address: P.O. Box 944272, Sacramento, CA 94244-2720). It was distributed under the provisions of the Library Distribution Act and *Government Code* Section 11096.

SAFE  
SCHOOLS

# EXECUTIVE SUMMARY

California Safe Schools Assessment (CSSA) is the school crime reporting system implemented by the California Department of Education in accordance with California *Penal Code*

Section 628 et seq. The

purpose of CSSA is to provide objective information for local and

state school officials to use in assessing the safety

of public schools in

California.

With the exception of charter

schools, all California public schools, school programs, school districts, and county offices of education serving kindergarten through grade twelve are required to collect data on and report incidents of school crime as defined by CSSA. The program offers training and technical assistance to all reporting agencies to ensure data are collected completely and consistently throughout the state. It also performs a three-part validation process to determine whether the data are reliable and to improve the statewide reporting system. Validation procedures include quality control of all forms submitted, site visits at selected reporting agencies, and a cross-check of certain CSSA data with student suspension data.

When all data are received and validation efforts are completed, the Department is required to prepare a summary report of the CSSA data for the previous school year and submit it to the California State Legislature by March 1 of each year. This is the fifth annual report to the Legislature.

This report contains data collected for the 1999-2000 school year and includes comparison data from

previous school years. The data on incidents are presented as the total number of incidents in each crime category and as *crime rates* (i.e., the number of incidents per 1,000 students enrolled). Comparisons are made of crime rates and not of the total number of incidents because the crime rates reflect the changes in student enrollment from year to year.

The comparison of the 1999-2000 CSSA data with the data from previous years reveals the following information:

- The crime rate for Drug and Alcohol Offenses increased for the second year in a row. The validation results indicate this increase is due to improved reporting by local educational agencies, not to an actual increase in crime. While the number of students suspended under *Education Code* Section 48900(c) and (d) has remained fairly stable, the number of student suspects reported to CSSA for Drug and Alcohol Offenses has increased.
- Crimes Against Persons reported to CSSA also increased for the second year in a row. Although a portion of this increase is due to improved reporting, the rise may represent a real increase because the rate of student suspensions rose approximately 10 percent above the 1998-99 suspension rate. Without verifying all suspension data submitted, however, CSSA cannot document the actual portion of the increase attributable to each circumstance.
- Property Crimes showed an increase in 1999-2000, but the total remained below the number reported for the baseline year of 1995-96. The dollar loss for Property Crimes dropped slightly to just under \$24 million, or \$4.01 per student.
- Other Crimes showed a decline, which is attributed to a 40 percent drop in reported bomb threats from the inordinate number reported in 1998-99.
- Crimes Against Persons represented 32 percent of all reported crimes in the four crime categories, replacing Property Crimes as the most frequently reported category of school crimes.
- Battery continued to have the highest rate per 1,000 students (3.88) of all reported crimes. The crimes with the highest rates within each of the other crime categories also remain unchanged: vandalism had the highest crime rate (1.70) in the Property Crimes category; possession of drugs had the highest rate (1.54) in the Drug and Alcohol Offenses category; and possession of weapon(s) had the highest rate (1.14) in the Other Crimes category.

► The usefulness of CSSA data depends on their accuracy. We provided training on-site for our school administrators and support staff to improve our understanding of what needs to be reported to CSSA.

Marge Cole, Director, Student Support Services  
Grossmont Union High School District

- The nature and incidence of crimes vary according to the school level and correlate to the student behavioral problems at each level. For example, among middle/junior high schools the highest crime rate is for Crimes Against Persons, and at the high school level the highest rate is for Drug and Alcohol Offenses.
- At the elementary school level, the rates for three of the four crime categories remained fairly stable compared with those of the previous year while Crimes Against Persons continued to increase.
- Both Crimes Against Persons and Drug and Alcohol Offenses increased for the second year in a row at the middle/junior high school level, but Property Crimes and Other Crimes showed no apparent trend.
- The Drug and Alcohol Offenses category continues to be the one with the most common incidents reported on high school campuses, representing 44 percent of all incidents reported at this level in 1999-2000.
- Programs operated by county offices of education experienced a drop in the crime rates for all four crime categories.
- The number of weapons found on campus continued to decline. The number of firearms seized on campus (510) dropped 20 percent from 1998-99, and the number of knives confiscated (5,363) declined 13 percent.
- There were no changes in the characteristics of the known suspects involved in school crime: 81 percent were male and 93 percent

were students at the school in which the crime occurred.

- Similar to the suspects in the incidents, most victims were male (68 percent) and most were students (88 percent). Of the remaining 12 percent of the victims, 6 percent were certificated employees, 3 percent were classified employees, and 3 percent were other persons.

To support schools in collecting and reporting school crime data, CSSA conducted 16 workshops in different regions of the state in 1999-2000, serving 654 individuals in basic training sessions and 339 in advanced training sessions. In addition, CSSA conducted individualized on-site training sessions for over 1,000 school staff who may not otherwise have been able to attend training.

CSSA's validation procedures revealed that the majority of agencies accurately reported incidents involving students. The quality and accuracy of the data submitted to CSSA also continued to improve. The correlation between the number of student suspects reported to CSSA and the reported number of students suspended for violating *Education Code* Section 48900 was within the acceptable range of 90 percent to 110 percent for three of the five reportable categories. The rate of accuracy for the reporting of student suspects for Drug and Alcohol Offenses improved from 90 percent to 98 percent.

CSSA worked to implement the program recommendations contained in the 1998-99 annual report. The improvements are as follows:

- CSSA received student suspension data for incidents of battery, assault with a deadly weapon,

Drug and Alcohol Offenses, robbery/extortion, and sex offenses from 95 percent of all local educational agencies. CSSA analyzed the data and validated the accuracy of reported incidents.

- CSSA staff conducted 100 validation site visits to assist agencies with determining the accuracy of their data and to provide technical assistance to bring the agencies' reporting processes into alignment with CSSA guidelines.
- CSSA pilot-tested a paperless reporting system at a county office of education. The results of the pilot indicated that such a system will not work unless each school or program site enters its own data using a separate identifiable CDS code assigned by the Department. County offices often operate multiple programs using one CDS code for all programs, making individual program data impossible to track.
- Effective July 1, 2000, all districts and county offices of education will submit school or program site data to CSSA in place of summary data.

With five years of school crime data analyzed, policymakers can now use these data with the current findings of prevention research to develop recommendations to increase school safety and academic achievement. Prevention research points toward a broad-based, comprehensive approach involving the family, school, and community. This approach focuses on positive youth development and meaningful youth involvement that result in increased academic achievement and in reduced risk behaviors, such as drug

use. The findings from 1999-2000 CSSA data, which are included in the "Findings and Recommendations" section of this report, are summarized as follows:

- The statewide increase in Crimes Against Persons, particularly at the elementary and middle/junior high school levels, indicates a need to find positive, effective approaches to deter aggressive student behavior.
- The elevated rate of Drug and Alcohol Offenses at the high school level and the increase in these offenses at the middle/junior high school level point to the need for parents, schools, and communities to enhance their efforts to promote responsible student behavior and curtail the use of alcohol and other drugs.
- The reduction of crime rates in the Other Crimes category and the rise in the crime rates for theft, vandalism, and graffiti in the Property Crimes category indicate that schools and communities should continue to focus attention on campus security measures.
- In general, the classification of victims and known suspects—primarily male students—shows that school crime is the result of student behavior; it is not caused by the intrusion of strangers on the campuses.

These findings show that the Department should continue to provide information and support for the following resources to help local educational agencies join with parents, families, and communities to set and enforce clear behavior standards; promote and support conflict resolution and other effective techniques to

- *Our school district partners with parents and other community members to provide a safe and supportive environment where students can develop a solid foundation to become productive, responsible citizens and lifelong learners.*

Sharon McHolland, Superintendent  
Alta Loma Elementary School District

reduce conflicts among students, with particular attention to bullying; involve students in addressing school safety issues; and access available funding and other resources to prevent future occurrences of anti-social behavior and resolve student behavior problems in the classroom:

Contact information for these and other resources is available in the "Findings and Recommendations" section of this report or by contacting the Department's Safe Schools and Violence Prevention Office at (916) 323-2183 or at <http://www.cde.ca.gov/spbranch/safety>.

# INTRODUCTION

The safety of children attending California schools continues to be of major concern for the people and government leaders of the state. The California Legislature adopted *Penal Code* Section 628, et seq. as a means of measuring crime and violence in public schools in the state. Since July 1995 all schools, school programs, school districts, and county offices of education have been responsible for reporting

incidents that occur under a defined set of conditions. CSSA, in turn, compiles the data submitted by these local educational agencies and prepares a state-wide annual report for the Legislature on or before March 1 of each year.

For the purposes of this report, incidents reported to CSSA are categorized as follows: Drug and Alcohol Offenses, Crimes Against Persons, Property Crimes, and Other Crimes. Definitions of crimes and a copy of the reporting form are provided in Appendix A. Appendix B contains a list of school safety and violence prevention grant programs available through the California Department of Education. Appendixes C and D contain tables that indicate emerging trends in school crimes.

CSSA is administered by a partnership consisting of the California Department of Education, Butte County Office of Education, and Duerr Evaluation Resources (a private evaluation firm). Staff from these three entities support the program at the state level, and representatives from these entities form the CSSA Management Team that directs the development and implementation of the program. The Management Team periodically consults the CSSA Advisory Committee, which consists of representatives

from the Office of the Attorney General, California Department of Finance, Office of the Legislative Analyst, Office of the Secretary for Education, K–12 educational associations, and local educational agencies throughout the state. This committee reviews the program, makes recommendations regarding existing and proposed crime categories, and provides valuable insight and perspective in developing information collection and dissemination systems.

The CSSA reporting process relies on the efforts of thousands of people. Staff members at more than 8,000 public schools identify and record crimes; school district and county office of education personnel compile and cross-check the school program site data; and staff members from the CSSA partnership collect

and report the data from more than 1,000 school districts and county offices of education. Although CSSA believes significant progress has been made in obtaining accurate and consistent data throughout the state over the past five years, caution should be exercised in using the data to compare the incidence of school crime reported by local educational agencies. The incidence of school crime is influenced by factors in the community that are beyond the control of schools.

The CSSA Management Team thanks its partners in local educational agencies, state and local law enforcement, and statewide professional organizations and agencies for their support, imagination, good sense, and encouragement in creating and sustaining CSSA.

► *The incidence of school crime is influenced by factors in the community that are beyond the control of schools.*

# RESULTS

The results presented in this section are based on data submitted by all school districts and county offices of education in California. Information on how these data are collected is presented in the section “Reporting Process.”

Data reported to CSSA are aggregated into four reporting categories: Property Crimes, Crimes Against Persons, Drug and Alcohol Offenses, and Other

Crimes. With the exception of Property Crimes, which are reported regardless of when they occur, incidents are reported if they occur during school hours, during a school-sponsored activity, or when students are traveling directly to and from school. Therefore, Crimes Against Persons, Drug and Alcohol Offenses, or Other Crimes occurring on public school campuses during the evenings, weekends, or holidays are not recorded unless they take place during a school-sponsored activity. Employees who are on campus after hours for work-related business are considered to be conducting a school-sponsored activity.

When reviewing the results the reader must bear in mind that the purpose of the CSSA program is to document all reportable incidents affecting the safety of California’s schoolchildren in kindergarten through grade twelve. To provide California’s policymakers with adequate information on which to base their decisions regarding age-

appropriate prevention and intervention strategies, administrators report incidents regardless of the age of the suspects or whether police reports have been filed as long as the incidents are reportable offenses as defined in the CSSA manual *Understanding and Reporting School Crime*. The definitions in this manual are based on the *Penal Code*, *Health and*

*Safety Code, and Business and Professions Code.* The definitions for reportable crime categories are included in Appendix A of this report.

In addition to using the definitions as reporting criteria, administrators must always investigate the intent of the suspect to determine if a reportable crime was committed. For example, if a student was suspended for injuring another student, before reporting the crime, the administrator must determine whether the suspect intended harm. The suspect may have injured the other student during play wrestling, which is unacceptable behavior at public schools but is not reported as a battery. To be reported as a battery, an incident must meet three clear criteria: there must be (1) an obvious victim; (2) an obvious suspect; and

(3) an intent to harm another. Another example of an offense that would not be reported is the case of a student who bragged to others that he had a bag of marijuana when he merely had a bag of oregano. Even though the administrator may have decided that a suspension was warranted, this incident is not reportable because the student was not in possession of an illegal substance.

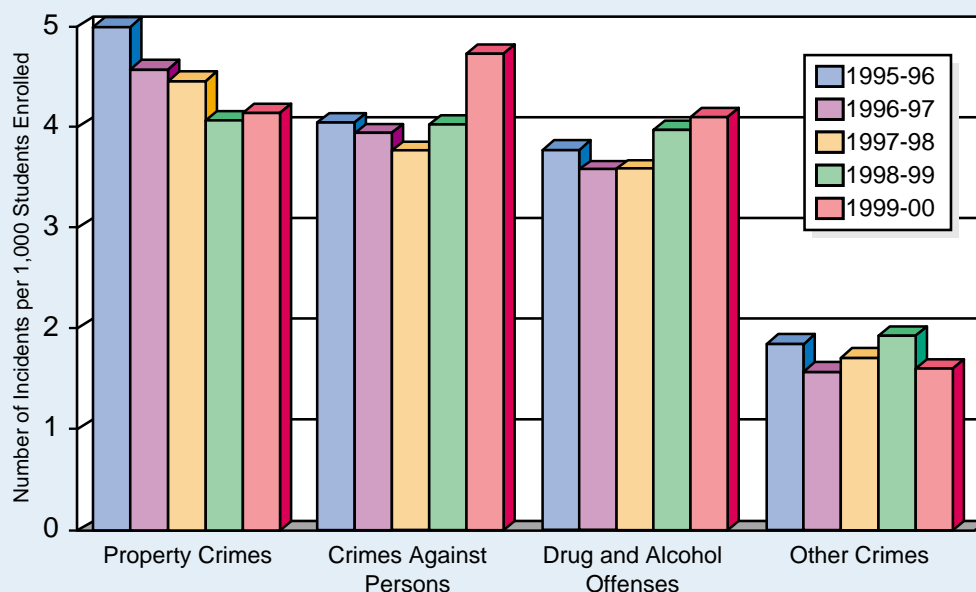

The data presented in this report have been validated for accuracy. Based on this validation the data are considered reasonably accurate representations of reportable incidents occurring on California public school campuses during the 1999-2000 school year. The section "Reporting Process" presents detailed information on the results of this validation.

► *The validation process was very useful to our district. It showed us where we could make improvements to simplify our reporting system.*

Ray Carlile, Director of Student Services  
Grant Joint Union High School District  
Sacramento

**Chart 1**  
**School Crime Trend Analysis for California Public School Campuses**  
**for the 1995-96 to 1999-00 School Years**

As Chart 1 demonstrates, incidents reported to CSSA increased in all categories except Other Crimes; however, the CSSA team does not consider the increase in Drug and Alcohol Offenses to represent actual increases in crime because the suspension rate for these offenses did not increase over the 1998-99 rate. Rather these increases appear attributable to the local educational agencies' improved reporting. Based on the validation results presented in the section "Reporting Process," the accuracy of the CSSA data improved for a second year in a row; therefore, an increase in reported incidents is not unusual.

The cause of the increase in Crimes Against Persons is less apparent. To determine whether the higher numbers were due to improved reporting or to an actual increase in these crimes, CSSA compared the number of students suspended under

*Education Code* Section 48900(a) during 1998-99 and 1999-2000. The difference, which takes enrollment into account, reveals that approximately 10 percent more students were suspended for these offenses in 1999-2000. A portion of this rise may be due to an actual increase in these crimes; however, it is impossible to document an actual rate of increase without verifying all suspension data received.

In contrast to these increases, a decrease was apparent in the Other Crimes category. The decrease was due to a drop in bomb threats from the inordinate number recorded in 1998-99 following the Columbine High School incident in Colorado in the spring of 1999.

The majority of incidents reported to CSSA happened on school campuses (92 percent); the remaining incidents took place on students' direct routes to and from school (5 percent), at a

school-sponsored activity (2 percent), or on the school bus (1 percent). Most incidents occurred during school hours (77 percent), which for CSSA purposes begin when the first class bell rings in the morning and end when the last bell rings in the afternoon.

Most known suspects were students at the school where the crimes occurred (93 percent). These known suspects were mostly male (81 percent). Just 18 percent of reported incidents were committed by unknown suspects. The most common crimes unknown suspects committed were Property Crimes. For the 25,430 Property Crimes reported, suspects were recorded in only 43 percent of the cases.

Table 1 displays the results of CSSA reports of crime rates per 1,000 enrolled students. Converting the statistics to a crime rate allows longitudinal comparisons of the data by taking into account changes in student population. Although 1995-96 is shown as the baseline year, caution

should be used when making comparisons to this first year of reporting. Because of the newness of the program, that year was considered a learning experience for most agencies. CSSA staff focused on assisting agencies in developing strong reporting processes and did not validate the data for accuracy.

Chart 1 provides a pictorial presentation of overall crime trends, and Table 1 provides a more detailed breakdown of the four crime categories. Caution should be exercised when drawing conclusions from the percentage of change in individual crime categories. Because crime rates are very low (most rates are less than 0.5 per 1,000 students), the percentage of change tends to overemphasize the change between years. For example, a 0.01 change in the crime rate for bomb threats (from 0.05 to 0.06) constitutes an increase of 20 percent. However, a change in a crime rate of 1.05 to 1.06 (still a 0.01 increase) represents an increase of less than 1 percent.

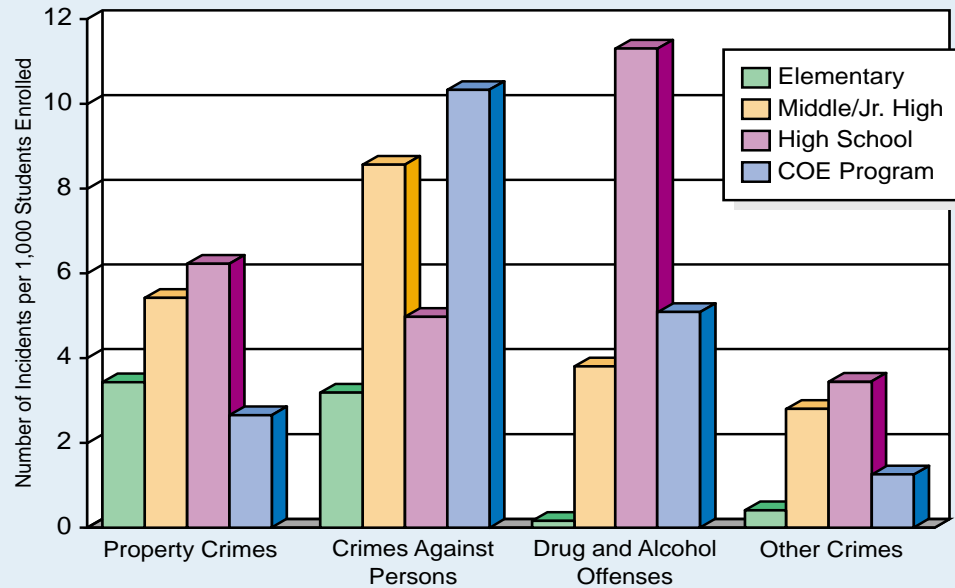

**Table 1**

Bomb Threat	0.05	0.10	0.06	-40	20

- Crime rates are based on the following statewide student enrollments:  
1995-96—5,467,330, 1997-98—5,727,303, 1998-99—5,839,286, and 1999-00—5,946,421.
- Because of space considerations, data for the 1996-97 and 1997-98 school years have been omitted.

**Chart 2**  
**Crime Rates in California Public Schools for the 1999-00 School Year**  
**(by Type of Crime and School Level)**

High schools experience the highest crime rate in all categories except Crimes Against Persons (see Chart 2). Middle/junior high schools and county office of education (COE) programs have the highest rates in

that category, with battery by far the most common incident reported. Drug and Alcohol Offenses are the most frequently reported crimes at high schools.

**Table 2**

- Do not calculate percentage changes in raw data. Changes in raw data do not account for changes in enrollment.
- Because of space considerations, data for the 1996-97 and 1997-98 school years have been omitted.

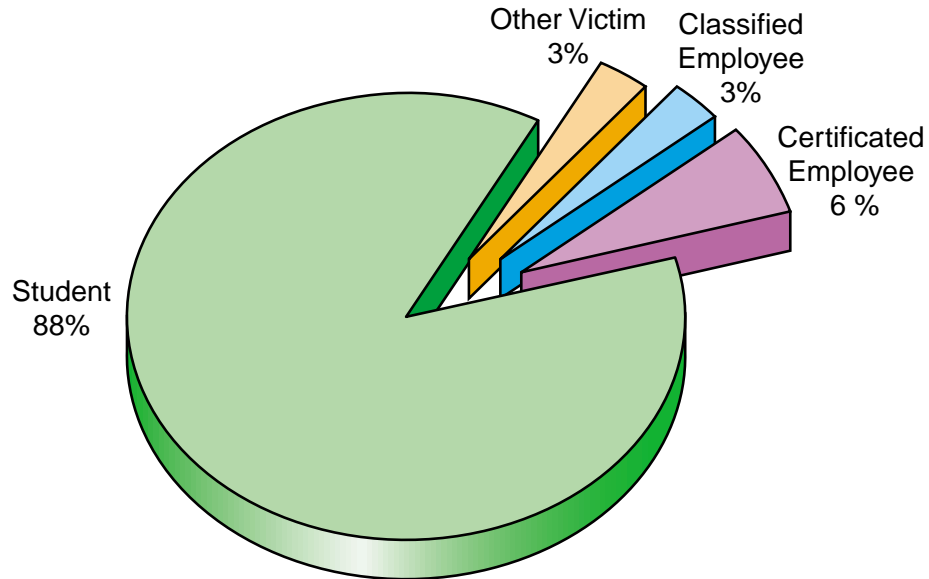

The breakdown of incidents has shifted slightly from previous years. In contrast to past years when Property Crimes were most frequent, Crimes Against Persons represented the greatest proportion of crime (32 percent) reported in 1999-2000 (see Table 2). Battery remained the most common individual crime reported: 27 percent of all reported incidents were batteries.

When reporting Crimes Against Persons, site recorders are asked to include a

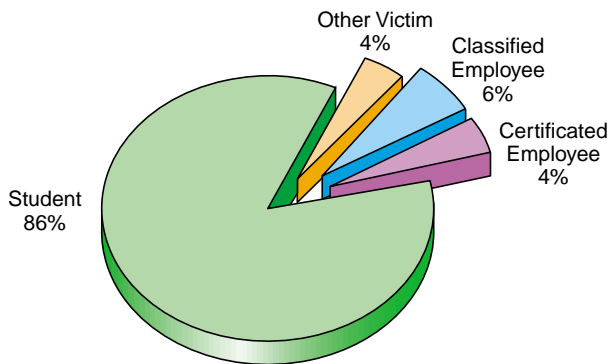

description of the victims. The description is limited to the victims' gender and classification (certificated or classified employee, student, or other). As with the suspects in the incidents, most victims were male (68 percent) and most were students at the school where the crime occurred (88 percent). Chart 3 shows a breakdown of the classification of victims in all Crimes Against Persons.

Chart 3

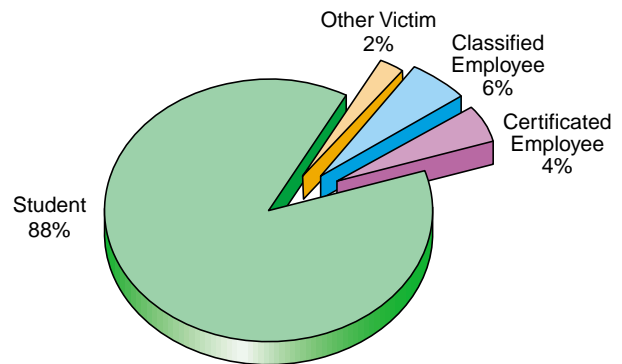

**Victims of Crimes Against Persons in California  
Public Schools for the 1999-00 School Year**

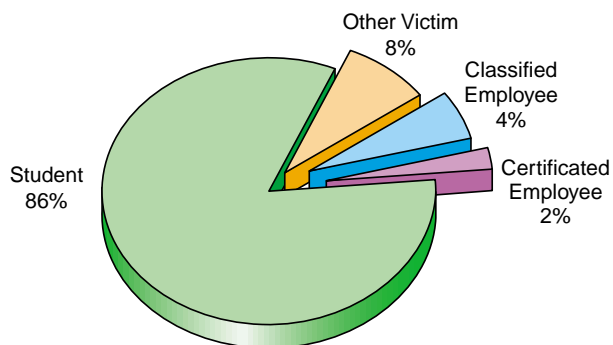

**Assault with a Deadly Weapon**

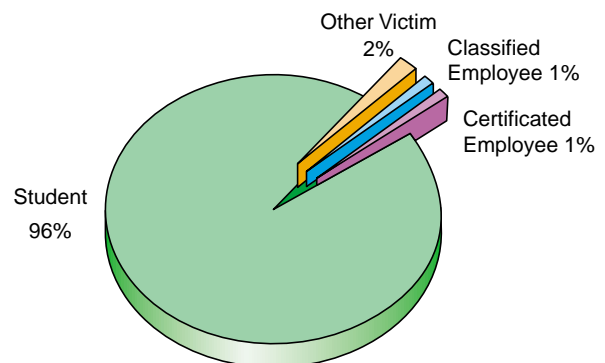

**Battery**

**Robbery/Extortion**

**Sex Offenses**

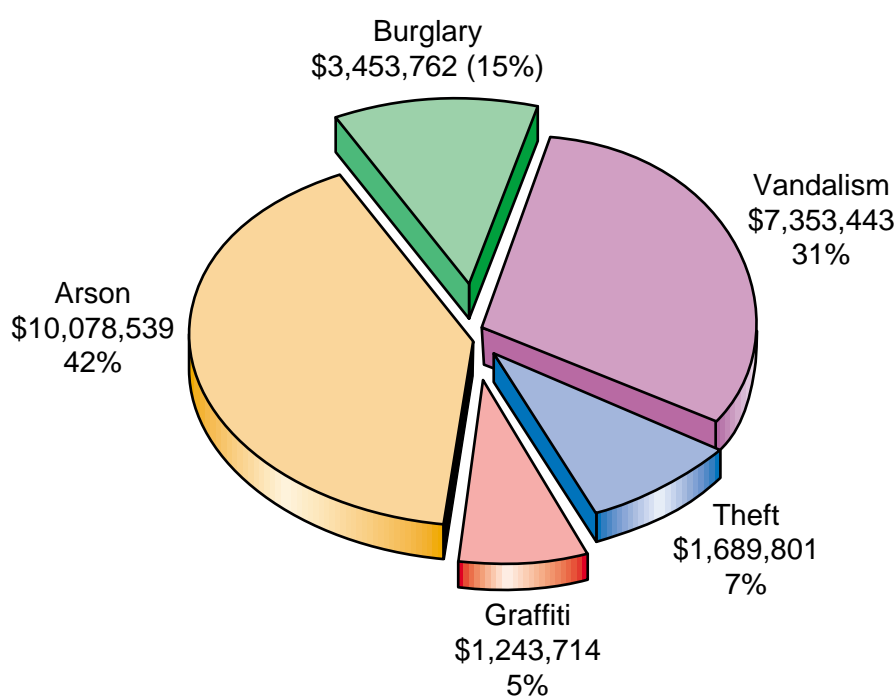

The economic loss to local educational agencies (LEAs) from Property Crimes was nearly \$24 million, or \$4.01 per student. These estimates include the costs of materials and labor for repairing or replacing damaged or lost property and any other

related costs. They do not include any compensation from insurance companies or restitution from the students, parents, or guardians. Chart 4 illustrates the breakdown of dollar losses by type of Property Crimes reported.

**Chart 4**  
**Dollar Losses to LEAs from Property Crimes in California**  
**Public Schools for the 1999-00 School Year**

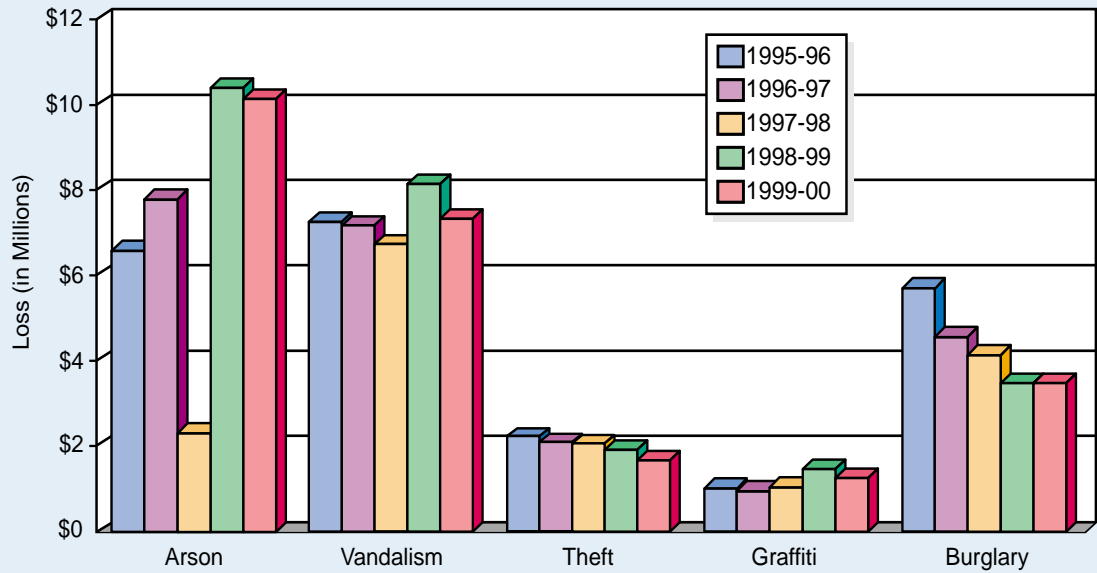

The amounts shown in the chart do not represent the total loss from Property Crimes committed on school campuses or during school-sponsored activities. Except for burglary only those crimes resulting in an economic loss beyond defined dollar thresholds are reported to CSSA. Vandalism, arson, and graffiti are reported only if the economic loss is \$100 or more, and theft is reported if the economic loss is \$50 or more. Further, once a crime is determined

to result in a dollar loss greater than the defined threshold, a second criterion must be met for the loss to be reported: the loss must involve only school district or county office of education property. Therefore, although crimes against personal property resulting in a loss greater than the threshold are reported, the economic loss is not. Approximately one-third of the Property Crimes in public schools in 1999-2000 involved personal property.

Chart 5

**Losses to LEAs from Property Crimes in California Public Schools for the 1995-96 to 1999-00 School Years**

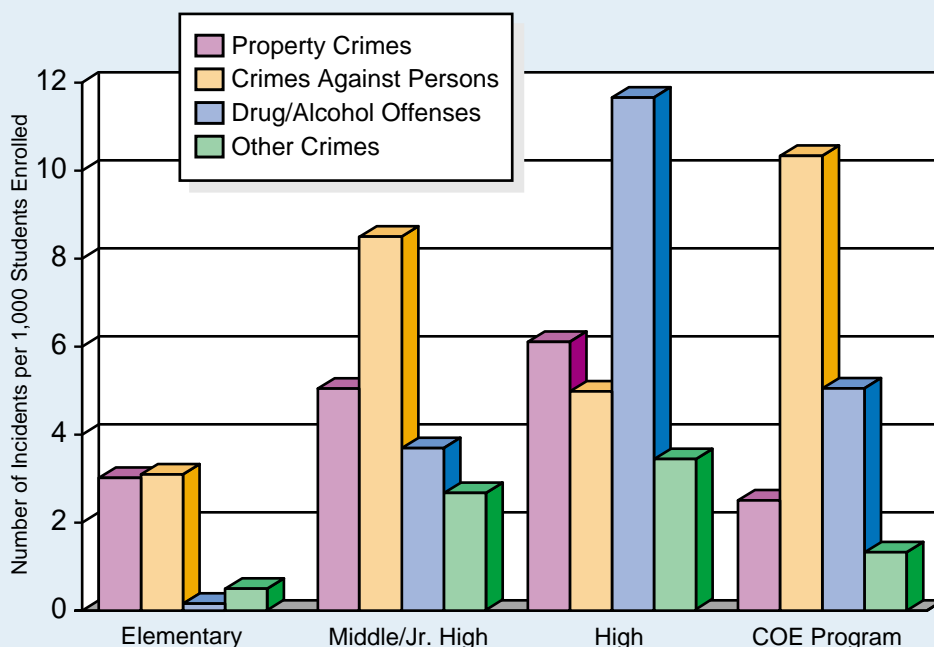

A comparison of the 1999-2000 dollar loss with losses in previous years shows that the overall dollar loss for

Property Crimes decreased by approximately \$1.5 million, even though incidents increased (see Chart 5).

Chart 6

### Crime Rates in California Public Schools for the 1999-00 School Year (by Type of Crime and School Level)

The nature and incidence of crimes vary according to the school level and correlate to the behavior problems that occur at each level. For example, the lowest rate of crime in elementary schools was for Drug and Alcohol Offenses. Chart 6 shows a comparison of crime rates by school level for the 1999-2000 school year.

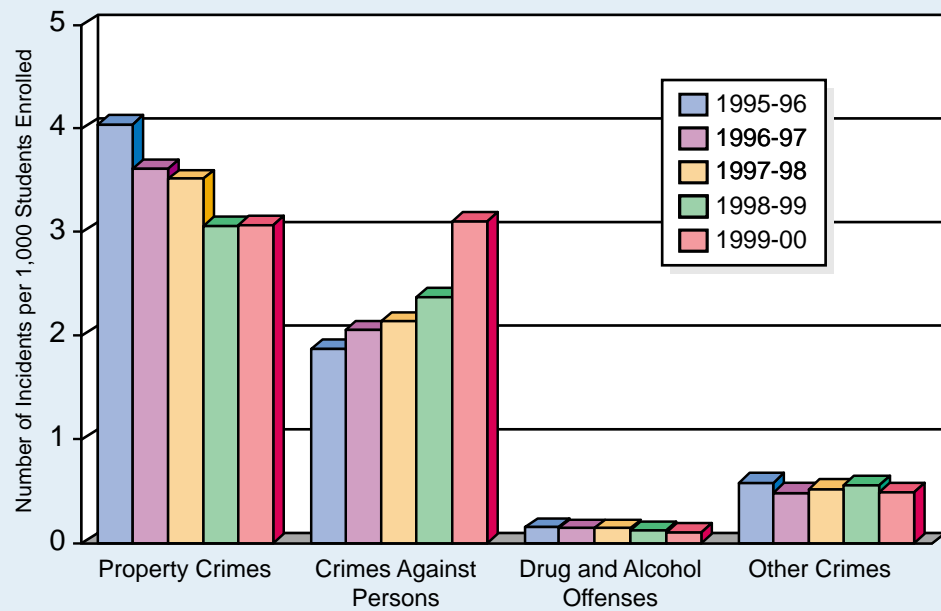

Overall, high schools had the highest incidence of Drug and Alcohol Offenses—11.63 incidents per 1,000 students. The use of alcohol or

drugs was the most typical incident reported in high schools. By far the most common crimes at middle/junior high schools and county-run programs were Crimes Against Persons. Battery was the most common incident reported in this category.

The charts on the following pages display the changes in crime rates for each of the following schools: elementary, middle/junior high, and high schools and programs administered by county offices of education (COE).

Chart 7

### Change in Crime Rates in California Public Elementary Schools for the 1995-96 to 1999-00 School Years

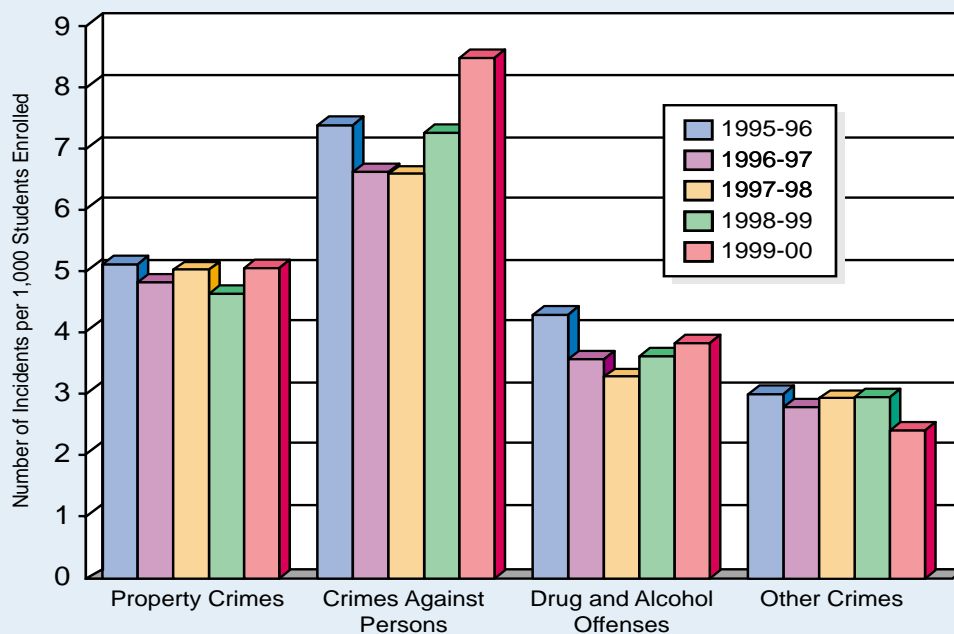

Although other crime rates remained fairly stable compared with those of previous year, the rate of Crimes Against Persons continued to

increase at the elementary school level (see Chart 7). As noted earlier, however, some of this increase is likely due to improved reporting.

Chart 8

**Change in Crime Rates in California Public Middle/Junior High Schools  
for the 1995-96 to 1999-00 School Years**

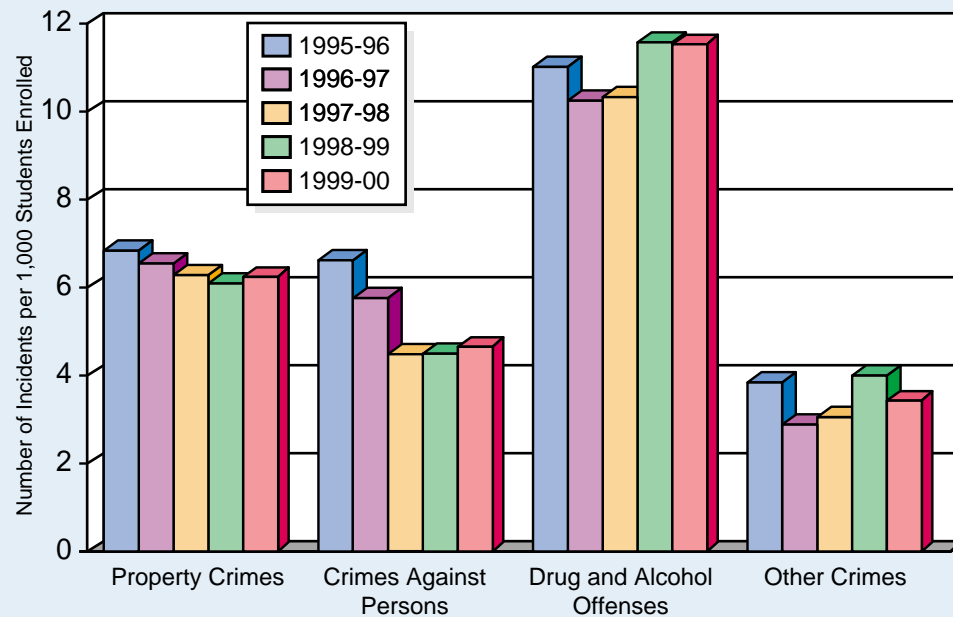

As Chart 8 shows, changes in crime rates varied at the middle/junior high school level. Both Crimes Against Persons and Drug and

Alcohol Offenses increased for the second year in a row while Property Crimes and Other Crimes showed no apparent trend.

Chart 9

### Change in Crime Rates in California Public High Schools for the 1995-96 to 1999-00 School Years

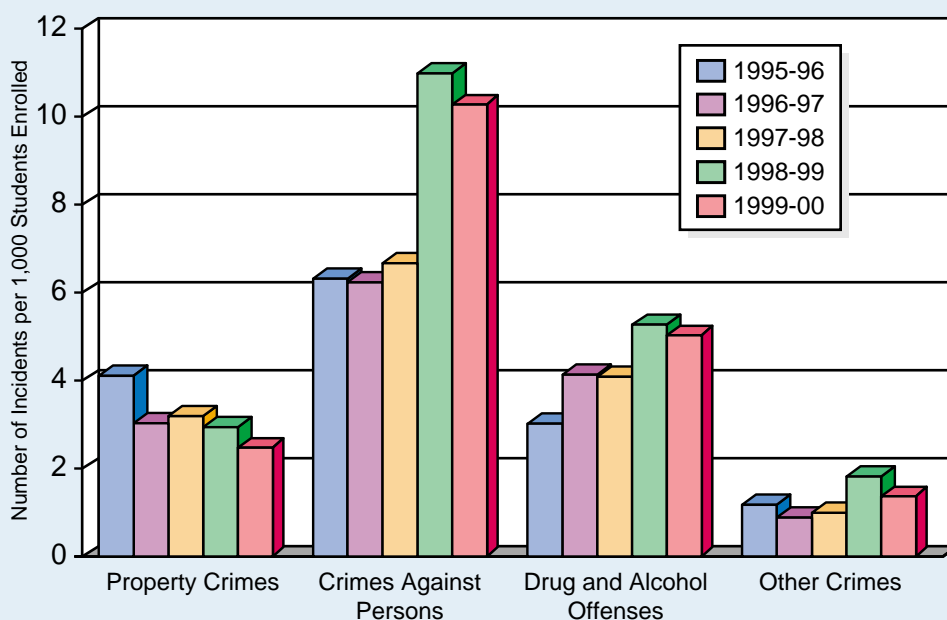

The most common incidents reported in high schools were Drug and Alcohol Offenses, which represented 44 percent of all reported incidents in 1999-2000 (see Chart 9). The lowest rate for those crimes

occurred in 1996-97 when there were 10.5 incidents per 1,000 students. During 1999-2000, just under 12 incidents of Drug and Alcohol Offenses occurred per 1,000 students enrolled in California high schools.

Chart 10

**Change in Crime Rates in County Office of Education Programs  
for the 1995-96 to 1999-00 School Years**

Programs run by county offices of education experienced decreases in all four crime categories in 1999-2000. As Chart 10 shows, the most commonly reported crimes were Crimes Against Persons. The most frequently reported incident in this category was battery.

Generally, crimes involving weapons are reported as Crimes Against Persons and as possession of a weapon. In reporting these incidents, site recorders are to indicate whether the weapon was a firearm, knife, or other type of weapon. If the weapon was a firearm, the site recorder is also asked to identify the type: shotgun or rifle, handgun, or other. The criteria for reporting weap-

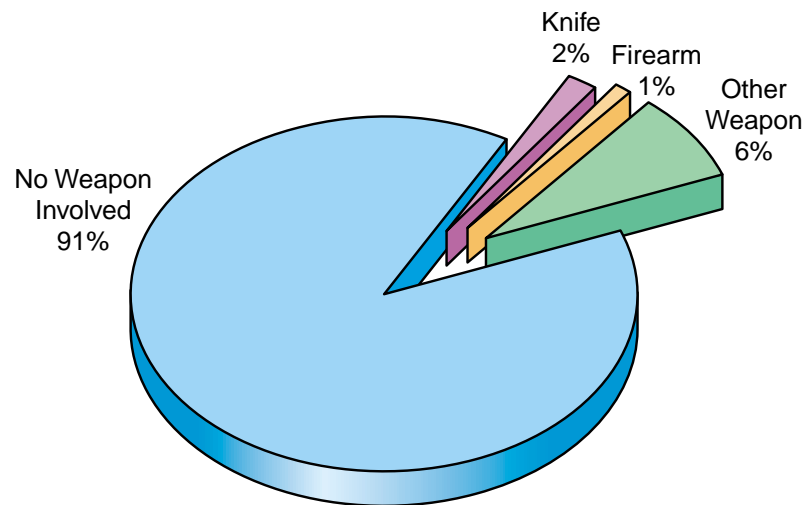

ons on a public school campus are consistent with those in the California *Penal Code*. Any knife, gun, or other weapon used during the commission of a crime against a person is reportable to CSSA. However, reporting criteria differ for the crime of possession of a weapon. Although all firearms are reportable, only incidents involving knives with a locking blade or with a folding blade longer than 2.5 inches are reported as the possession of a knife. Other weapons are any items that are neither a knife nor a firearm but that, by design, are intended to be a weapon. For example, brass knuckles and ninja stars are both weapons by design, so possession of these items is reportable.

Chart 11 displays the percentage of weapons involved in Crimes Against Persons and possession of a weapon.

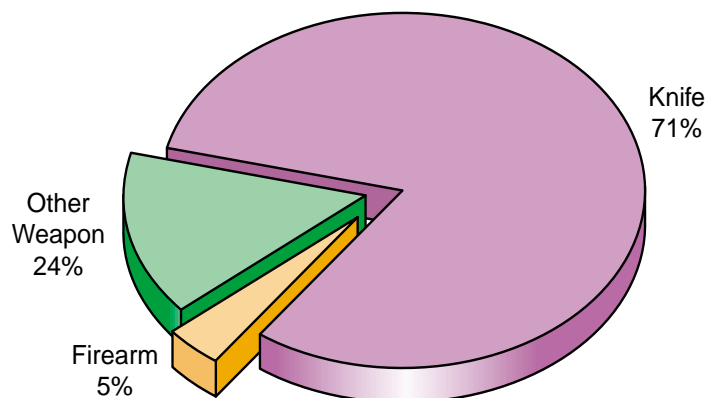

**Chart 11**

**Weapons Involved in Crime Incidents in California  
Public Schools for the 1999-00 School Year**

**Crimes Against Persons**

**Possession of Weapon(s)**

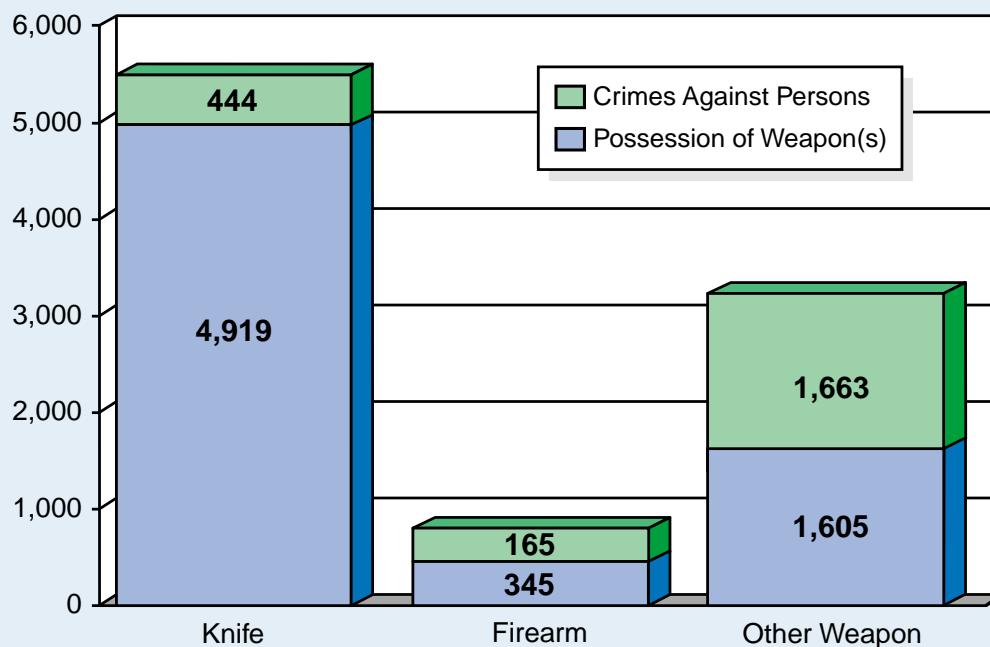

As indicated earlier, most Crimes Against Persons were batteries (84 percent). By definition a battery does not involve a weapon.

Overall, only 9 percent of all Crimes Against Persons involved a weapon, with “other” weapons the most common.

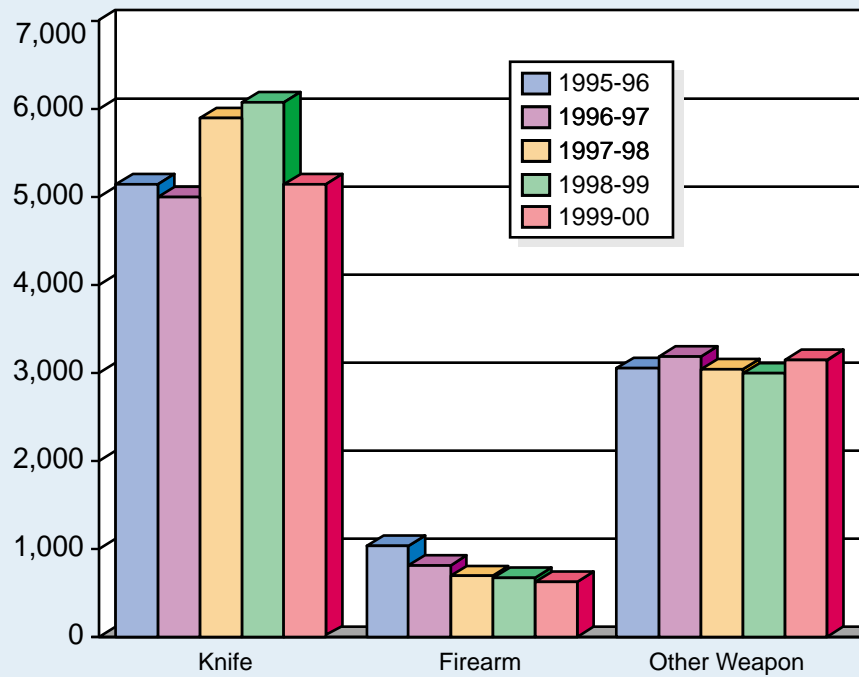

**Chart 12**  
**Weapons Reported by Type of Crime for the 1999-00 School Year**

As Chart 12 indicates, knives were the most prevalent weapons found on campuses in 1999-2000 with a total of 5,363 knives reported (444 were used in Crimes Against Persons and 4,919 were found in the possession of suspects). Firearms were seldom used during crimes or found on campus. A total of 510 firearms

were confiscated. As shown in Chart 13, the total decreased from last year (637) and the previous year (647). The most common firearm found was a handgun. Of the firearms confiscated, 303 were handguns, 30 were shotguns or rifles, and 177 were other firearms.

Chart 13

**Breakdown of Weapons Reported for the  
1995-96 to 1999-00 School Years**

# REPORTING PROCESS

The CSSA reporting process is based on the premise that individual incidents of school crime should be reported as soon as possible. To document each incident, all school sites use a common instrument, the “School Crime Reporting Form,” which is referred to as the CSSA incident form. (See Appendix A.)

The CSSA Management Team developed the original one-page form

from suggestions the advisory committee made following a thorough review of school crime reporting systems throughout the nation. The crimes listed on the CSSA incident form, as well as additional information about each incident, are defined by state regulations.

Each school district and county office of education designates a representative to serve as a liaison between the site recorders and CSSA. This CSSA representative has access to basic and advanced training programs, the toll-free technical assistance line, and resource materials—all of which are designed to help establish a consistent and reliable reporting process. Representatives are responsible for coordinating the CSSA activities of individual sites through communication with site recorders designated by the site administrator.

Site recorders are responsible for completing the CSSA incident forms and sending them to the CSSA representative each month. The site recorders are asked to review the forms for accuracy and to cross-check them with secondary data at each site (e.g., suspension records, discipline referrals, and theft and vandalism reports) to ensure that all reportable incidents are recorded. The CSSA representatives are responsible for helping to ensure the accuracy and timely submittal of data to the California Department of Education.

The 1999-2000 school year was the final year in which the CSSA representatives had the option of submitting either summary data or incident data to the state. Effective July 1, 2000, summary data are no longer accepted. There were three options for submitting incident data:

- Bundle the individual incident forms and send them to CSSA for aggregation and analysis.
- Enter the incident data directly into the statewide database on the Internet.
- Enter the incident data into the CSSA Data Entry and Reporting System and submit a diskette containing an export of this database.

Local educational agencies that elected to report summary data had two options for submittal:

- Enter the incident data into the CSSA Data Entry and Reporting System and submit a summary report generated from this system.
- Manually aggregate the incident data and submit the results on the "Semi-Annual District Summary Reporting Form" provided by CSSA.

In 1999-2000, 58 percent of the local educational agencies elected to report incident data (46 percent submitted actual incident forms, 5 percent submitted a diskette, and 7 percent submitted data through the Internet). The remaining 42 percent of local educational agencies reported summary data to CSSA (32 percent manually aggregated the data, and 10 percent used the CSSA Data Entry and Reporting System to generate a summary report).

As part of its ongoing efforts to simplify the reporting process, in 1999-2000 CSSA pilot-tested a paperless reporting system with the Butte County Office of Education using the Internet. Because the CSSA program uses a site-based reporting system, the primary requirement local educational agencies must meet to use paperless reporting is that they must enter data at the site, not at the district or county office of education.

The pilot test helped CSSA to identify several components of the new system that required revision prior to the system's full implementation in 2000-2001. CSSA addressed these issues in the following manner:

- To remain consistent with other data entry, CSSA revised the system to include an auto-generated incident number.

▶ As part of its ongoing efforts to simplify the reporting process, in 1999-2000 CSSA pilot-tested a paperless reporting system with the Butte County Office of Education using the Internet.

- To allow local educational agencies to complete recommended cross-checks with student suspension data, CSSA added suspect information to the incident listing, which generates a list of each incident entered for any selected agency. The original report included only the date, location, and type of incident. Performing a cross-check allows the CSSA representative to determine if any reportable incidents were not entered or if nonreportable incidents were entered in error.
- Because of the reporting problems presented by county offices of education that operate more than one education program under a single county-district-school (CDS) code, CSSA added an additional requirement for participation: for an agency to elect the paperless reporting system, it must designate one CDS code per reporting site.

### Accuracy of the Data

To determine whether the CSSA data collection system is accurate and reliable and to improve the statewide system of reporting, the CSSA Management Team developed and staff implemented a validation system using three primary procedures:

- Employing quality control measures on all returned forms to ensure that the forms were complete and internally consistent.
- Conducting validation visits at selected reporting agencies.
- Performing a validation cross-check between certain CSSA data and data on students violating Section 48900 of the *Education Code*. This check used discipline

data collected from 96 percent of the local educational agencies.

CSSA's internal quality control system intercepts all improperly completed incident and summary forms and corrects them. All incorrect forms are subsequently corrected through collaboration with the reporting agency. The number of incident forms that were initially sent to CSSA with blanks or inconsistent responses dropped from 25 percent in 1995-96 to 13 percent in 1996-97 and then declined to 10 percent in 1997-98. The error rate has remained unchanged since that time. This information suggests that ongoing efforts by the CSSA team to provide technical assistance and training to local educational agencies have led to improvements in reporting accuracy.

Determining the accuracy of school crime data presents technical challenges primarily because few records from local educational agencies can be used to corroborate data reported to CSSA. With regard to incidents involving students, suspension and other discipline records can be important sources of comparison data; however, a similar validation measure has not been discovered for nonstudent incidents. For example, most property crimes reported are committed by unknown suspects. Reports of these incidents have not been validated for accuracy due to the lack of consistent secondary data sources across agencies.

The CSSA definitions of the following reportable offenses are consistent with several categories in *Education Code* Section 48900 and are used to validate the accuracy of school crime data:

- The possession, use, sale, or furnishing of drugs or alcohol

- The possession of drug paraphernalia
- The commission of a battery or assault with a deadly weapon
- The commission of robbery / extortion
- The commission of sex offenses

Although there are exceptions to correlations between the two sets of data, when a student is suspended for one of the violations cited above, in most cases the incident should be recorded on a CSSA incident form. An example of a possible exception is an incident occurring when a student is truant. Such an infraction violates the *Education Code* but is not reportable to CSSA, so the local educational agency appears to be underreporting. Further, while data are requested for all violations of *Education Code* Section 48900, many agencies track in a systematic manner only those violations resulting in suspension; therefore, it is also possible that an agency may appear to overreport incidents to CSSA. For example, an agency may report a student's drug or alcohol use to CSSA, but it places the student in a drug or alcohol diversion program instead of suspending him or her. If the agency submits suspension records only, it will appear to be overreporting. For these reasons, CSSA accepts agency data as accurate if the correlation results yield matches of 90 percent to 110 percent.

Before data are analyzed from the correlation of CSSA statistics with discipline statistics and published in the annual report, each agency receives a "CSSA Progress Report," which provides the agency's results for the cross-check. The primary purpose of the progress report is to give feedback to local educational

agencies on the accuracy of their data. Further, this report provides an opportunity for agencies that under- or overreported to improve their correlations either by submitting forms for incidents that should have been recorded or by voiding incidents that should not have been recorded. While CSSA cannot require that all agencies respond to the progress report, agencies that do not respond are targeted for a validation site visit, which is described in the following paragraph.

One hundred validation site visits were conducted in 1999-2000 to assist agencies with determining the accuracy of their data and to provide them with technical assistance to bring their reporting processes into alignment with CSSA guidelines. Agencies are selected for these visits for three possible reasons. The first, failure to submit discipline data in the previous school year, results in an automatic visit. The remaining two reasons, failing to respond or inadequately responding to the CSSA Progress Report, place the agency in the selection pool. However, agencies selected for a Coordinated Compliance Review by the Department are exempt from CSSA validation for that school year. Agencies are randomly selected from this pool until all site-visit slots have been filled. Twenty sites were selected for failing to submit requested discipline data; 65 for significant discrepancies in reporting with no explanation for the discrepancies provided; and 15 because they did not adequately resolve discrepancies in the data submitted and instead indicated that they would improve future reports. Agencies received an individualized site-visit report based on their unique needs. Because generalizing these

findings into an aggregate summary would not provide information useful to the statewide data set, the results are not presented in this statewide report.

Data on student discipline related to the violation of *Education Code* Section 48900 were collected from 999 local educational agencies (96 percent of all reporting agencies).

This step in the validation of CSSA data sought to address two separate issues: (1) the level of compliance by reporting agencies; and (2) the overall accuracy of the statewide data set. Table 3 summarizes the compliance level of individual reporting agencies. Table 4 (on the following page) summarizes the overall accuracy of the statewide data.

**Table 3**  
**Compliance of Local Educational Agencies with CSSA**  
**for Selected Reporting Categories**

Agencies' Level of Reporting Compliance	Number and Percentage of Reporting Agencies by Reportable Crime Category									
	Battery/ Assault with a Deadly Weapon		Drug/Alcohol Offenses		Robbery/ Extortion		Possession of Drug Paraphernalia		Sex Offenses	
	Number	%	Number	%	Number	%	Number	%	Number	%
Appear to be reporting accurately	747	76	830	84	908	92	856	87	885	90
Appear to be underreporting	171	17	111	11	62	6	98	10	78	8
Appear to be overreporting	66	7	43	4	14	1	30	3	21	2

*Note:* The total number of reporting agencies does not equal the total number of respondents due to incomplete data received at the time this analysis was completed.

As Table 3 indicates, the majority of agencies are accurately reporting incidents involving students. More than 80 percent of required reporters received matches of 90 percent to 110 percent or greater in four of the five reporting categories. Although the accuracy of the data has consistently improved each year, the results reveal that 1999-2000 marks the first school year that the CSSA data set can be used as a reliable measure of school crime for nearly all reporting agencies.

Although Table 3 indicates that nearly all agencies are reporting stu-

dent incidents accurately, it does not provide a clear understanding of the accuracy of the statewide data set. The majority of reporting agencies report fewer than ten incidents to CSSA on an annual basis. Therefore, if those that were seriously underreporting tended to be larger agencies, the accuracy of the statewide data set would be diminished. It is important to conduct a separate analysis of the statewide data set to determine its overall accuracy. Table 4 summarizes the results of that analysis.

**Table 4**

**Statewide Comparison of the Number of Students Violating *Education Code* Section 48900 and the Number of Student Suspects Reported on CSSA Incident Forms for the 1999-00 School Year**

<i>CSSA Reporting Category</i>	<i>Number of Students in Violation</i>	<i>Number of Student Suspects</i>	<i>Percentage of Student Suspects Compared with Students in Violation</i>
Battery/assault with a deadly weapon	10,096	10,944	108
Use, possession, sale, and/or furnishing of drugs or alcohol	11,268	11,024	98
Robbery/extortion	585	528	90
Possession of drug paraphernalia	1,639	1,144	70
Sex offenses	792	618	78

Table 4 shows that CSSA data accurately reflect most incidents involving students that occur on California public school campuses. For three of the five reportable categories, the correlation between student suspects reported to CSSA and students violating *Education Code* Section 48900 is within the acceptable range of 90 percent to 110 percent. The exceptions are for two categories: sex offenses and the possession of drug paraphernalia.

### Training

CSSA provides extensive training at locations throughout the state for representatives of districts and county offices of education and school or program site recorders. New CSSA representatives and site recorders attend basic training; those who have already attended basic training or who have been implementing the process for more than a year receive advanced training.

Basic training includes the following components:

- An overview of CSSA and general reporting procedures
- A guide for developing a site reporting system
- An in-depth discussion of crime definitions and distinctions of school crime reporting
- Step-by-step instructions and practice completing the CSSA School Crime Reporting Form
- A hands-on exercise demonstrating a method of cross-checking CSSA incident forms with suspensions records and other available documentation

Advanced training is designed to meet the needs of CSSA representatives and site recorders who have not attended training for several years and desire an update and review. The advanced session includes the following elements:

- A brief overview of current CSSA reporting processes and procedures, including available electronic reporting options
- A hands-on exercise reviewing the cross-checking method learned in basic training
- A review of crime categories along with several sample scenarios that may be confusing to classify
- An opportunity to share ideas with peers about effective reporting and explore how the data are used at the local level

As CSSA consultants visit local educational agencies, they observe efficient and creative models for managing the reporting process, elements of which are shared with workshop participants. Trainees also have an opportunity to see several sample forms, such as a Notice of Suspension, Unusual Incident Report, Theft and Vandalism Report, and custodian's log. These models are used to improve procedures at districts, county offices of education, or school sites.

CSSA presented both types of workshops at 13 regional sites in the fall and at three sites in the spring,

serving a total of 654 individuals in basic training sessions and 339 in advanced training. Of the 993 individuals attending basic and advanced sessions, 61 attended both sessions; therefore, a total of 932 different trainees were served during the year. Because of turnover in local educational agency staff assigned to CSSA, these sessions continue to be well attended.

To prepare superintendents for the public release of the 1998-99 annual report, CSSA held four communications and media relations workshops throughout California. The workshops included an overview of CSSA reportable incidents along with a discussion of the annual report. The director of the Communications Office in the California Department of Education assisted in the presentation again this year with one session on developing media relations and another on responding to difficult questions about school crime. These workshops continue to be popular with superintendents and public information officers, who appreciate the opportunity to prepare for public reaction to the release of the data. The workshops help them develop strategies for communicating with their communities about constructive uses of the report.

- *As CSSA consultants visit local educational agencies, they observe efficient and creative models for managing the reporting process, elements of which are shared with workshop participants.*

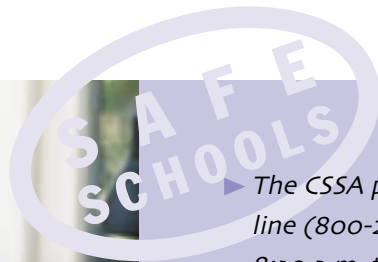

## Technical Assistance

Technical assistance continues to be one of the strengths of the CSSA program. Of the many forms of assistance the program offers, one of the most successful is the technical assistance telephone line (800-273-6363), which operates Monday through Friday, 8:30 a.m. to 4:30 p.m. Staff members answer questions about crime categories, transmission of data, requests for materials, electronic reporting of school crime, and other issues related to school safety. This year staff logged 5,000 incoming calls; since the inception of the CSSA program, the line has received more than 18,000 calls.

Continued assistance is also offered through *CSSA Update*, a quarterly newsletter sent to all CSSA district and county office of education representatives and to superintendents. The newsletter prints current information about the program, answers to frequently asked questions, and information regarding other issues related to school safety. Recipients are asked to duplicate and distribute the newsletter to all of their site recorders. The newsletter can also be accessed through the CSSA homepage at <http://www.cssa.butte.k12.ca.us/>.

The CSSA homepage has proven to be another effective technical assistance tool. In addition to information about CSSA, the Web site provides information about prevention and safety programs; model crime prevention and safety programs; and local, state, and federal resources. The homepage offers online registration for training sessions and allows all CSSA publications to be viewed online.

Technical assistance site visits were again offered to all districts and county offices of education during the 1999-2000 school year. This year 33 local educational agencies requested visits. Short, tailor-made training sessions were held for over 1,000 staff who may not otherwise have been able to attend training. These mini-training sessions offer a quick overview of the reporting process, an in-depth discussion of crime categories in conjunction with a crime categories video, and hands-on practice for the cross-check process to ensure the accuracy of the data reported. Although all requests for technical assistance visits this year were for the training sessions, the program also offers on-site, one-on-one meetings for the CSSA representatives to assist them in establishing a more effective recording and reporting system.

► The CSSA program's technical assistance telephone line (800-273-6363) operates Monday through Friday, 8:30 a.m. to 4:30 p.m. Since the inception of the CSSA program, the line has received more than 18,000 calls.

# FINDINGS AND RECOMMENDATIONS

Data from the fifth year of CSSA statewide school crime reports show that the crime rates in three of the four CSSA crime categories increased in 1999-2000. A portion of the

increase was due to improved reporting, particularly for Drug and Alcohol Offenses; nevertheless, the five years of data provide valuable objective information

to help schools, school districts, county offices of education,

local government, and state policymakers to identify crime trends and to develop appropriate programs, approaches, and strategies for combating crime on school campuses. Descriptions of the 1999-2000 CSSA findings follow.

The statewide rise in Crimes Against Persons indicates a continuing need to identify positive, effective approaches to preventing or redirecting students' aggressive behavior. Battery remained the crime with the highest rate per 1,000 students enrolled (3.88). Although the crime rate for sex offenses (0.26) was much lower than that for battery, the elevated rate indicates that these crimes require further examination.

The most frequent crimes in the Drug and Alcohol Offenses category were possession of drugs and use of

alcohol or drugs. These data indicate a need for parents, schools, and communities to continue to help students refrain from using alcohol and other drugs.

The 14 percent decline in the statewide crime rate for Other Crimes shows a 12 percent reduction in weapon possession for 1999-2000, a drop due primarily to the fewer number of firearms (510) and knives (5,363) found on campus. This category also saw corresponding decreases in the crime rates for loitering/trespassing (down 18 percent),

destructive/explosive devices (down 10 percent), and bomb threats (down 40 percent).

The dollar loss as a result of Property Crimes on school campuses dropped \$1.5 million from the prior year to nearly \$24 million. However, the crime rate for Property Crimes rose 8 percent for theft and 5 percent for vandalism and graffiti. Consequently, schools and communities must continue their attention to campus security measures.

Examining crime rates by school level provides useful information for school administrators in determining how best to focus prevention and intervention efforts. At the elementary school and middle/junior high school levels, and for programs operated by county offices of education, Crimes Against Persons are the most frequently reported crimes. This is a new finding for elementary schools; in the previous four years, Property Crimes were the crimes with the highest rates for that school level. In the future, elementary schools must continue to monitor, and perhaps reevaluate, their interventions with inappropriate student behavior, particularly bullying.

The middle/junior high school level saw increases in Crimes Against

Persons and Drug and Alcohol Offenses for the second year in a row. These higher rates may again indicate that schools and communities must enhance their efforts to promote responsible student behavior.

Drug and Alcohol Offenses remained the most common crimes reported at the high school level with a rate of 11.63 in 1999-2000, just below the 1998-99 rate. The rate for Drug and Alcohol Offenses was almost twice the rate of Property Crimes (6.28), which were the second most reported crimes on these campuses. These CSSA data demonstrate that high schools must extend their efforts to prevent drug and alcohol use among this student population.

County offices of education operate programs for special education, court and community schools, education in juvenile halls, and other specialized programs for students in kindergarten through grade twelve. The five-year trend data show varying results whereas the 1999-2000 CSSA data for these programs show a decline in all four crime categories. Crimes Against Persons had the highest rate (10.22), which was more than double the rate for Drug and Alcohol Offenses (5.01), the second-highest category of crimes. Although the students in these programs represent

► We use our CSSA data for safe school planning and program services. The data remove subjectivity and allow us to focus on results.

Sharon Corkrum, Director of Secondary Education  
Upland Unified School District

populations with specialized educational needs, the behavior problems implicit in these crimes are similar to the behavior patterns evident in the middle/junior high population.

In general, the statewide data show the classifications of victims and known suspects remained relatively stable during the five years. In 1999-2000 males comprised 68 percent of victims and 81 percent of known suspects, and both victims and known suspects were most often students at the school where the crime took place (88 percent and 93 percent respectively). These findings show that teachers or other staff members were rarely the victims of campus crimes (6 percent). These findings also indicate that school crimes result from students themselves, not from strangers intruding on the campuses.

While the statewide CSSA data give an overall picture of crime on public school campuses, the local data can help to give a more comprehensive view of student behavior when combined with other student information (e.g., the results of the California Healthy Kids Survey, student discipline data, attendance data, and school dropout rates). Policymakers can use these data sets to direct resources to various prevention programs.

Allocation of resources to address student behavior problems is not a task for schools to undertake in isolation. Current studies in prevention research indicate that a broad-based, comprehensive approach that joins the efforts of the family, school, and community and is focused on positive youth development and meaningful youth involvement results in increased academic achievement and reduced risk behaviors, such as drug use, among students. Schools need

family and community support to evaluate factors contributing to student risk behaviors, to assess prevention strategies, and to enforce clear standards for acceptable behavior on campus.

Schools now have the resources to engage communities in the safe school planning process; to develop partnerships with law enforcement and other community agencies; and to select effective safety and prevention programs, approaches, and strategies. The Department should continue to provide information and support for schools to access the following resources:

*Safe Schools: A Planning Guide for Action* (California Department of Education 1995) describes how to solicit the support of students, parents, families, and other community members in developing a comprehensive safe school plan based on the four basic principles of the safe school process: Safe schools (1) are caring schools; (2) are built through cooperative efforts; (3) communicate high standards; and (4) stress prevention. This guide can be purchased from CDE Press by calling 1-800-995-4099.

For schools in need of general assistance and resource materials to develop partnerships and implement strategies to promote safe schools, free technical assistance and information is available through the School/Law Enforcement Partnership Cadre. The cadre consists of school safety experts from education and law enforcement who work as partners to help schools in California. To inquire about services, contact the Department's Safe Schools and Violence Prevention Office at (916) 323-2183, or call the Office of the Attorney General's Crime and Violence Prevention Center at (916) 324-7863.

All school districts and county offices of education in California receive federal funds under the Safe and Drug-Free Schools and Communities Act of 1994, Title IV of the Improving America's Schools Act (IASA). Schools use these funds to initiate and maintain alcohol-, drug-, tobacco-, and violence-prevention and intervention programs. Schools also receive state funds through the School Safety and Violence Prevention Act and the 1999-2000 School Improvement and Pupil Achievement Block Grant. Schools may use these funds to hire additional staff trained in conflict resolution, to teach pupils and school staff how to resolve conflicts peacefully, to institute programs that address bullying behavior, and to purchase equipment to enhance campus security. They may also use these funds for other purposes with the goal of school safety.

Schools can apply for grants through the Department's Safe Schools and Violence Prevention Office to fund activities promoting conflict resolution and student involvement; to implement collaborative programs among the school, community, and police; and to improve school safety. (See Appendix B.) More information is available by contacting the office at (916) 323-2183.

Information about curriculum and programs proven to be effective in maintaining healthy school environments and preventing or reducing antisocial behavior among the student population is available through many sources. *Getting Results* (California Department of Education 1998), and its subsequent updates, guides schools in selecting effective prevention and intervention approaches and strategies. *Getting Results* is available

online through the California Healthy Kids Resource Center at <http://www.hkresources.org/>. Schools may borrow curriculum materials from the center as well as obtain information, training, and technical assistance related to health and safety. The California Healthy Kids Program Dissemination Center offers information and technical assistance on alcohol-, drug-, tobacco-, and violence-prevention programs currently in use in California schools. The Center showcases model prevention and intervention programs throughout the state. The Program Dissemination Center can be reached toll-free at 1-877-401-5001.

There are a number of training and technical assistance resources schools can access through the Department's Safe Schools and Violence Prevention Office that address specific safe school issues. For example, *Hate-Motivated Behavior in Schools* is a resource book available from the office that outlines response strategies for school boards, administrators, law enforcement, and communities. The office also holds workshops throughout the state to help schools implement policies and practices that prevent or respond to such incidents. A description of available approaches for school-based conflict resolution programs and profiles of successful California programs can be found in *School-Based Conflict Resolution Programs: A California Resource Guide*, which was developed for use by school boards, educators, and parents. The publication *Keeping Schools Safe: Involving Parents and Other Caring Adults in Supervision Programs* offers promising approaches, a toolkit, and related resources to help schools enhance their campus supervision programs.

Another publication, *Classroom Management: A California Resource Guide for Teachers and Administrators of Elementary and Secondary Schools*, is available through the office to accompany related workshops. The guide contains information to help teachers prevent future occurrences of anti-social behavior and to resolve student behavior problems in the classroom; the accompanying workshops show teachers how to select strategies to address student behaviors and improve classroom management and instructional skills. The office sponsors

other workshops at various locations throughout the state, including school crisis response planning and simulation workshops, which present information for county and district prevention and safety coordinators and law enforcement officials on developing and testing emergency procedures.

A full description of these and other programs available through the office can be obtained online at <http://www.cde.ca.gov/spbranch/safety> or by calling the Safe Schools and Violence Prevention Office at (916) 323-2183.

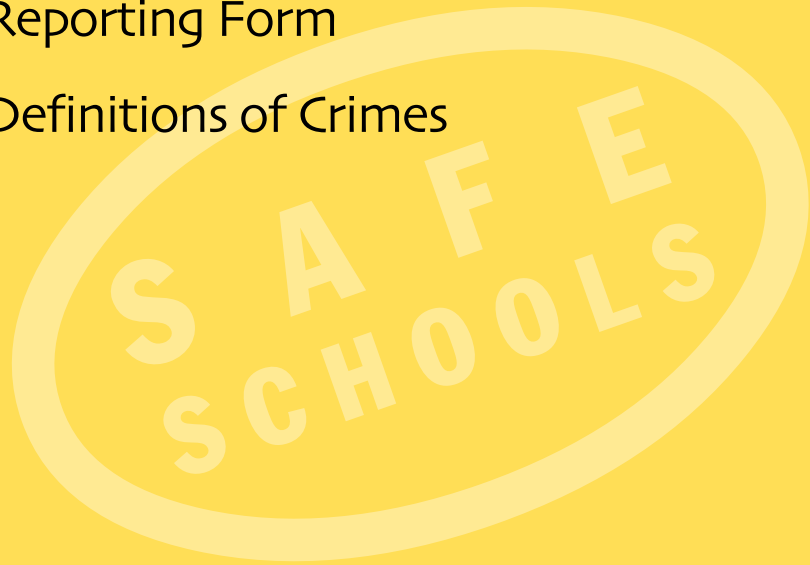

- *It is important to give the public a snapshot view of what is happening in public schools so that dollars can be allocated appropriately to the districts to address school safety issues.*

Susan Wong, Assistant Superintendent of Pupil Services  
San Francisco Unified School District

# CSSA Reporting Tips

## Crimes Against Persons

### Assault with a Deadly Weapon

*Intent to do harm must be present.*

*Any instrument which is used in a threatening manner against another person with the intent to cause great bodily injury is considered a deadly weapon. This includes, but is not limited to guns, knives, rocks, sticks, pencils, chairs, etc.*

### Sex Offenses

*The intent of the suspect is sexual in nature.*

*For CSSA, sex offenses are crimes of touch.*

*Do not report sexual harassment.*

*Do not report sexual exposure.*

*Do not report pantsing unless you determine the intent was sexual in nature.*

### Homicide

*An attempted Homicide should be reported as an Assault with a Deadly Weapon.*

### Battery

*Three primary elements must be present: a clear victim and a clear aggressor who has the intent to do harm.*

*There is no minimum age for the crime of battery.*

*Do not report mutual combat.*

*Do not report attempted batteries.*

*Battery excludes the use of a weapon.*

- *If a weapon is brandished or used in a threatening manner, the incident is reported as an Assault with a Deadly Weapon.*
- *If an instrument not originally designed as a weapon is used during the course of a Battery, the instrument must meet the weapon definition listed under Assault with a Deadly Weapon to be considered a weapon. If it does not meet this definition, report the incident as a Battery with no weapon involved.*
- *If a person involved in a Battery is found to be in possession of a weapon, report the possession as a separate incident.*

## Other Crimes

### Possession of a Weapon

*Report any incident to CSSA involving a knife with any fixed or locking blade, or any folding knife with a blade over 2 1/2 inches in length.*

*Do not report the possession of replica/look-alike weapons.*

*It is illegal for a person under the age of 16 to possess pepper spray. Minors 16 years of age and older may possess pepper spray if they have written parental permission to do so.*

### Destructive/Explosive Devices

*Do not report devices such as bullets, snappers or poppers, firecrackers, and fireworks with the exception of M-80s or Cherry Bombs.*

*Written or verbal threats to use destructive/explosive devices are reported as Bomb Threats.*

## Property Crimes

*Report only those incidents that meet the dollar threshold indicated on the front of this form.*

*There is not a dollar threshold associated with the crime of Burglary; report all Burglaries, including attempted Burglaries.*

## General Tips

*Do not report incidents occurring at district administrative offices where K-12 classes are not held.*

**For additional information  
phone the CSSA Technical Assistance line at  
800-273-6363**

## Definitions of Crimes

<i>Crime</i>	<i>Definition</i>	<i>Legal References</i>
<b>Arson</b>	The willful and malicious setting of fire to or burning of any structure or property. Arson does not include one burning his or her own property unless there is injury to another person or another person's property. For purposes of the CSSA, arson is reported only if the economic loss is \$100 or more.	<i>Penal Code</i> , sections 451 and 452
<b>Assault with a Deadly Weapon</b>	The use of a firearm, deadly weapon, or instrument other than a firearm or by any means of force likely to produce great bodily injury. <i>Reporting tip: Great bodily injury is defined as loss of consciousness, concussion, bone fracture, loss or impairment of any organ, a wound requiring extensive suturing, and serious disfigurement.</i>	<i>Penal Code</i> , sections 244.5, 245, 245.5, and 417.4
<b>Battery</b>	The willful and unlawful use of force or violence upon the person of another. <i>Reporting tip: Three primary elements must be present for a crime incident to be reported as battery: (1) an aggressor (suspect), who (2) intended to cause physical harm, to (3) an innocent person (victim).</i>	<i>Penal Code</i> , sections 242 and 243.2
<b>Burglary</b>	Any entry with the intent to commit a theft (even petty theft) or any felony, even though force may not have been used to gain entry.	<i>Penal Code</i> , Section 459
<b>Destructive/Explosive Devices</b>	<b>Destructive devices</b> mean any projectile containing any explosive or incendiary material or any chemical substance, bomb, facsimile bomb, grenade, explosive missile, or similar device or any launching device; weapon of a caliber greater than .60 caliber, which fires fixed ammunition or any ammunition other than a shotgun; rocket, rocket propelled projectile or similar device of diameter greater than .60 inch or launching device; breakable container, which contains a flammable liquid with a flashpoint of 150 degrees Fahrenheit or less and has a wick or similar device capable of being ignited; and any sealed device containing dry ice (CO <sub>2</sub> ) or other chemically reactive substances. <b>Explosive devices</b> mean any substance, or combination of substances, the primary common purpose of which is detonation or rapid combustion. Explosives include, but are not limited to, dynamite, nitroglycerin, black powder, propellant explosives, detonation primers, blasting caps, or commercial boosters; substances determined to be class A and class B explosives by the United States Department of Transportation; nitro carbo nitrate substances (blasting agent) as classified by the United States Department of Transportation; any material designated as an explosive by the State Fire Marshal; and certain class C explosives designated by the United States Department of Transportation. Included in this category are written or oral threats to use destructive / explosive devices. <i>Reporting tip: Devices such as snappers or poppers, firecrackers, and fireworks shall not be reported.</i>	<i>Penal Code</i> , sections 148.1 and 12301(a) <i>Health and Safety Code</i> , Section 12000
<b>Drug and Alcohol Offenses</b>	<b>Drug and alcohol offenses</b> mean the possession, use, sale, or furnishing of any drug, alcohol, or intoxicating substance, as well as drug paraphernalia, that is prohibited by law. Crimes to be reported for the purposes of the CSSA under Drug and Alcohol Offenses include Use of Alcohol/Drugs, Possession of Alcohol, Possession of Drugs, Possession of Paraphernalia, Possession for Sale of Drugs / Alcohol, Sale and /or Furnishing of Drugs / Alcohol.	<i>Penal Code</i> , sections 308(b), 380, 381, and 647(f). <i>Health and Safety Code</i> , sections 11014.5, 11018, 11054–11058, 11351, 11357, 11359, 11360, 11364, 11364.7, 11550, 11680, and 11681. <i>Business and Professions Code</i> , Section 25608

## Definitions of Crimes *(Continued)*

<i>Crime</i>	<i>Definition</i>	<i>Legal References</i>
<b>Graffiti</b>	<b>Graffiti</b> means any form of unauthorized painting, writing, or inscription on another's property regardless of the content or nature of the material used in the commission of the act. Reporting for the purposes of the CSSA program shall be limited to incidents of graffiti that result in an economic loss of \$100 or more.	<i>Penal Code</i> , Section 640.5
<b>Homicide</b>	The unlawful killing of a person by another person.	<i>Penal Code</i> , sections 187 and 192
<b>Loitering/Trespassing</b>	<b>Loitering</b> is to delay, to linger, or to idle about any school or public place without lawful business for being present. <b>Trespassing</b> refers to the entry on school grounds during school hours without registering with the site or program administrator, as required by law, and remaining after being asked to leave, or returning to the school grounds within 30 days of being asked to leave. Parents are an exception to this rule. Parents may return after seven days of being asked to leave.	<i>Penal Code</i> , sections 626.7–626.9
<b>Possession of Weapon</b>	The unauthorized possession of dangerous weapons, which include, but are not limited to, firearms, knives, and other weapons.	<i>Penal Code</i> , sections 244.5, 417, 653(g), 12020, 12220, 12403.7(d), and 12403.8
<b>Robbery/Extortion</b>	<b>Robbery</b> means the taking of property in possession of another, from his or her person or immediate presence, and against his or her will, accompanied by force or fear. <b>Extortion</b> means a threat to take or the taking of property from another person with his or her consent. The extortion was induced by a threat of force or wrongful use of fear. Extortion may occur over a period of time.	<i>Penal Code</i> , sections 71, 211, 212, 518, and 519
<b>Sex Offenses</b>	<b>Sex offenses</b> mean sexual battery, rape, statutory rape, sodomy, lewd and lascivious conduct with children, oral copulation, and child molestation.	<i>Penal Code</i> , sections 243.4, 261, 261.5, 286, 288, 288a, and 647.6
<b>Theft</b>	<b>Theft (larceny)</b> is the taking, leading, driving, or carrying away of property (including motor vehicles) belonging to another with the intent to deprive the rightful owner of its use. For purposes of the CSSA program, incidents of theft should be reported for theft of property which has a value of \$50 or more.	<i>Penal Code</i> , sections 484, 487, and 488
<b>Vandalism</b>	The malicious defacing, damaging, or destroying of school, student, or employee property. Reporting for purposes of the CSSA program shall be limited to incidents of vandalism that result in an economic loss of \$100 or more.	<i>Penal Code</i> , Section 594

Safe Schools Grant  
Programs, 2000-2001

# California Department of Education Safe Schools and Violence Prevention Office (SSVPO)

## Safe Schools Grant Programs, 2000-2001

<i>Grant</i>	<i>Amount of Funding</i>	<i>Purpose</i>	<i>Eligible Applicants</i>	<i>When Application Is Available</i>	<i>Contact</i>
Conflict Resolution and Youth Mediation	\$10,000 per school; \$280,000 statewide	To implement a conflict resolution and youth mediation program through on-site training, integrated curricula, and school community involvement	Schools	Fall	Bonnie Williamson SSVPO, (916) 324-6159 Arlene Shea Attorney General's Office (916) 324-7863
Gang Risk Intervention Program (GRIP)	Grants of \$100,000 per year; \$3 million statewide	To intervene in and prevent gang violence	County offices of education	November	Chuck Nichols, SSVPO (916) 323-1026
High-Risk Youth Education and Public Safety	\$18 million statewide (5-year projects)	To design and implement early interventions to prevent chronic juvenile delinquency	School districts and county offices of education		Bill Lane SSVPO (916) 323-5721
Safety Plans for New Schools	\$3 million statewide (new program)	To fund development and implementation of mandated safe school plans	School districts and county offices of education	To be announced	Steve Schwendimann SSVPO (916) 323-5277
School Community Policing Partnership	Up to \$325,000 each over a 3-year period; \$10 million statewide	To implement a collaborative comprising the school, community, and police to address school crime and safety issues	School districts and county offices of education	November	Yvette Rowlett, SSVPO (916) 445-5737 Steve Jefferies Attorney General's Office (916) 324-7863
School Safety and Violence Prevention Act of 1999 (AB 1113)	\$72 million statewide; entitlement based on enrollment in grades 8 through 12, with guaranteed minimum for small districts and counties	To provide safe schools and violence prevention for pupils	Schools districts and county offices of education serving grades 8 through 12	October	Louise Chiatovich SSVPO (916) 445-5695
Student Leadership Grant Program	Up to \$5,000 per grant; \$120,000 each year statewide	To implement safe or healthy school projects designed and led by students	High schools	September	Bonnie Williamson SSVPO (916) 324-6159
Title IV (IASA) Safe and Drug-Free Schools and Communities Act	\$41.1 million statewide (70 percent entitlement, 30 percent greatest need)	To initiate and maintain alcohol-, drug-, tobacco-, and violence-prevention programs in schools	County offices of education and school districts receive entitlements	June and October	Jerry Hardenburg, SSVPO (916) 323-1025 Greg Wolfe Healthy Kids Program (916) 657-3040
Tolerance Education	\$2 million statewide (new program)	To enable students and teachers to participate in educational programs focused on tolerance	School districts and county offices of education	To be announced (awaiting passage of implementing statute)	Bonnie Williamson SSVPO (916) 324-6159

Note: Additional information is available on the SSVPO homepage at <http://www.cde.ca.gov/sprbranch/safety>.

*Notes:*

- Counties, school districts, and county offices of education with fewer than 1,000 students enrolled are not included on this table. See Appendix D for data on all local educational agencies.
- Because of space constraints, the following crimes, constituting 3.2 percent of the total crimes reported, are not included on this table: bomb threat (348), destructive/explosive devices (548), homicide (4), and loitering/trespassing (1,884).
- When drawing conclusions from individual rate changes, remember that improved reporting practices by some local educational agencies may have resulted in apparent increases in crime rates that may not represent actual increases in crime.

## Notes:

- Counties, school districts, and county offices of education with fewer than 1,000 students enrolled are not included on this table. See Appendix D for data on all local educational agencies.
- Because of space constraints, the following crimes, constituting 3.2 percent of the total crimes reported, are not included on this table: bomb threat (348), destructive/explosive devices (548), homicide (4), and loitering/trespassing (1,884).
- When drawing conclusions from individual rate changes, remember that improved reporting practices by some local educational agencies may have resulted in apparent increases in crime rates that may not represent actual increases in crime.

## Notes:

- Counties, school districts, and county offices of education with fewer than 1,000 students enrolled are not included on this table. See Appendix D for data on all local educational agencies.
- Because of space constraints, the following crimes, constituting 3.2 percent of the total crimes reported, are not included on this table: bomb threat (348), destructive/explosive devices (548), homicide (4), and loitering/trespassing (1,884).
- When drawing conclusions from individual rate changes, remember that improved reporting practices by some local educational agencies may have resulted in apparent increases in crime rates that may not represent actual increases in crime.

1998-99			Enrollment less than 1,000 students					
1999-00	0.00	0.00	0.00	0.00	0.00	0.00	2.94	7.42

## Notes:

- Counties, school districts, and county offices of education with fewer than 1,000 students enrolled are not included on this table. See Appendix D for data on all local educational agencies.
- Because of space constraints, the following crimes, constituting 3.2 percent of the total crimes reported, are not included on this table: bomb threat (348), destructive/explosive devices (548), homicide (4), and loitering/trespassing (1,884).
- When drawing conclusions from individual rate changes, remember that improved reporting practices by some local educational agencies may have resulted in apparent increases in crime rates that may not represent actual increases in crime.

## Notes:

- Counties, school districts, and county offices of education with fewer than 1,000 students enrolled are not included on this table. See Appendix D for data on all local educational agencies.
- Because of space constraints, the following crimes, constituting 3.2 percent of the total crimes reported, are not included on this table: bomb threat (348), destructive/explosive devices (548), homicide (4), and loitering/trespassing (1,884).
- When drawing conclusions from individual rate changes, remember that improved reporting practices by some local educational agencies may have resulted in apparent increases in crime rates that may not represent actual increases in crime.

## Notes:

- Counties, school districts, and county offices of education with fewer than 1,000 students enrolled are not included on this table. See Appendix D for data on all local educational agencies.
- Because of space constraints, the following crimes, constituting 3.2 percent of the total crimes reported, are not included on this table: bomb threat (348), destructive/explosive devices (548), homicide (4), and loitering/trespassing (1,884).
- When drawing conclusions from individual rate changes, remember that improved reporting practices by some local educational agencies may have resulted in apparent increases in crime rates that may not represent actual increases in crime.

## Notes:

- Counties, school districts, and county offices of education with fewer than 1,000 students enrolled are not included on this table. See Appendix D for data on all local educational agencies.
- Because of space constraints, the following crimes, constituting 3.2 percent of the total crimes reported, are not included on this table: bomb threat (348), destructive/explosive devices (548), homicide (4), and loitering/trespassing (1,884).
- When drawing conclusions from individual rate changes, remember that improved reporting practices by some local educational agencies may have resulted in apparent increases in crime rates that may not represent actual increases in crime.

## Notes:

- Counties, school districts, and county offices of education with fewer than 1,000 students enrolled are not included on this table. See Appendix D for data on all local educational agencies.
- Because of space constraints, the following crimes, constituting 3.2 percent of the total crimes reported, are not included on this table: bomb threat (348), destructive/explosive devices (548), homicide (4), and loitering/trespassing (1,884).
- When drawing conclusions from individual rate changes, remember that improved reporting practices by some local educational agencies may have resulted in apparent increases in crime rates that may not represent actual increases in crime.

## Notes:

- Counties, school districts, and county offices of education with fewer than 1,000 students enrolled are not included on this table. See Appendix D for data on all local educational agencies.
- Because of space constraints, the following crimes, constituting 3.2 percent of the total crimes reported, are not included on this table: bomb threat (348), destructive/explosive devices (548), homicide (4), and loitering/trespassing (1,884).
- When drawing conclusions from individual rate changes, remember that improved reporting practices by some local educational agencies may have resulted in apparent increases in crime rates that may not represent actual increases in crime.

## Notes:

- Counties, school districts, and county offices of education with fewer than 1,000 students enrolled are not included on this table. See Appendix D for data on all local educational agencies.
- Because of space constraints, the following crimes, constituting 3.2 percent of the total crimes reported, are not included on this table: bomb threat (348), destructive/explosive devices (548), homicide (4), and loitering/trespassing (1,884).
- When drawing conclusions from individual rate changes, remember that improved reporting practices by some local educational agencies may have resulted in apparent increases in crime rates that may not represent actual increases in crime.

## Notes:

- Counties, school districts, and county offices of education with fewer than 1,000 students enrolled are not included on this table. See Appendix D for data on all local educational agencies.
- Because of space constraints, the following crimes, constituting 3.2 percent of the total crimes reported, are not included on this table: bomb threat (348), destructive/explosive devices (548), homicide (4), and loitering/trespassing (1,884).
- When drawing conclusions from individual rate changes, remember that improved reporting practices by some local educational agencies may have resulted in apparent increases in crime rates that may not represent actual increases in crime.

## Notes:

- Counties, school districts, and county offices of education with fewer than 1,000 students enrolled are not included on this table. See Appendix D for data on all local educational agencies.
- Because of space constraints, the following crimes, constituting 3.2 percent of the total crimes reported, are not included on this table: bomb threat (348), destructive/explosive devices (548), homicide (4), and loitering/trespassing (1,884).
- When drawing conclusions from individual rate changes, remember that improved reporting practices by some local educational agencies may have resulted in apparent increases in crime rates that may not represent actual increases in crime.

## Notes:

- Counties, school districts, and county offices of education with fewer than 1,000 students enrolled are not included on this table. See Appendix D for data on all local educational agencies.
- Because of space constraints, the following crimes, constituting 3.2 percent of the total crimes reported, are not included on this table: bomb threat (348), destructive/explosive devices (548), homicide (4), and loitering/trespassing (1,884).
- When drawing conclusions from individual rate changes, remember that improved reporting practices by some local educational agencies may have resulted in apparent increases in crime rates that may not represent actual increases in crime.

## Notes:

- Counties, school districts, and county offices of education with fewer than 1,000 students enrolled are not included on this table. See Appendix D for data on all local educational agencies.
- Because of space constraints, the following crimes, constituting 3.2 percent of the total crimes reported, are not included on this table: bomb threat (348), destructive/explosive devices (548), homicide (4), and loitering/trespassing (1,884).
- When drawing conclusions from individual rate changes, remember that improved reporting practices by some local educational agencies may have resulted in apparent increases in crime rates that may not represent actual increases in crime.

## Notes:

- Counties, school districts, and county offices of education with fewer than 1,000 students enrolled are not included on this table. See Appendix D for data on all local educational agencies.
- Because of space constraints, the following crimes, constituting 3.2 percent of the total crimes reported, are not included on this table: bomb threat (348), destructive/explosive devices (548), homicide (4), and loitering/trespassing (1,884).
- When drawing conclusions from individual rate changes, remember that improved reporting practices by some local educational agencies may have resulted in apparent increases in crime rates that may not represent actual increases in crime.

## Notes:

- Counties, school districts, and county offices of education with fewer than 1,000 students enrolled are not included on this table. See Appendix D for data on all local educational agencies.
- Because of space constraints, the following crimes, constituting 3.2 percent of the total crimes reported, are not included on this table: bomb threat (348), destructive/explosive devices (548), homicide (4), and loitering/trespassing (1,884).
- When drawing conclusions from individual rate changes, remember that improved reporting practices by some local educational agencies may have resulted in apparent increases in crime rates that may not represent actual increases in crime.

## Notes:

- Counties, school districts, and county offices of education with fewer than 1,000 students enrolled are not included on this table. See Appendix D for data on all local educational agencies.
- Because of space constraints, the following crimes, constituting 3.2 percent of the total crimes reported, are not included on this table: bomb threat (348), destructive/explosive devices (548), homicide (4), and loitering/trespassing (1,884).
- When drawing conclusions from individual rate changes, remember that improved reporting practices by some local educational agencies may have resulted in apparent increases in crime rates that may not represent actual increases in crime.

## Notes:

- Counties, school districts, and county offices of education with fewer than 1,000 students enrolled are not included on this table. See Appendix D for data on all local educational agencies.
- Because of space constraints, the following crimes, constituting 3.2 percent of the total crimes reported, are not included on this table: bomb threat (348), destructive/explosive devices (548), homicide (4), and loitering/trespassing (1,884).
- When drawing conclusions from individual rate changes, remember that improved reporting practices by some local educational agencies may have resulted in apparent increases in crime rates that may not represent actual increases in crime.

## Notes:

- Counties, school districts, and county offices of education with fewer than 1,000 students enrolled are not included on this table. See Appendix D for data on all local educational agencies.
- Because of space constraints, the following crimes, constituting 3.2 percent of the total crimes reported, are not included on this table: bomb threat (348), destructive/explosive devices (548), homicide (4), and loitering/trespassing (1,884).
- When drawing conclusions from individual rate changes, remember that improved reporting practices by some local educational agencies may have resulted in apparent increases in crime rates that may not represent actual increases in crime.

## Notes:

- Counties, school districts, and county offices of education with fewer than 1,000 students enrolled are not included on this table. See Appendix D for data on all local educational agencies.
- Because of space constraints, the following crimes, constituting 3.2 percent of the total crimes reported, are not included on this table: bomb threat (348), destructive/explosive devices (548), homicide (4), and loitering/trespassing (1,884).
- When drawing conclusions from individual rate changes, remember that improved reporting practices by some local educational agencies may have resulted in apparent increases in crime rates that may not represent actual increases in crime.

## Notes:

- Counties, school districts, and county offices of education with fewer than 1,000 students enrolled are not included on this table. See Appendix D for data on all local educational agencies.
- Because of space constraints, the following crimes, constituting 3.2 percent of the total crimes reported, are not included on this table: bomb threat (348), destructive/explosive devices (548), homicide (4), and loitering/trespassing (1,884).
- When drawing conclusions from individual rate changes, remember that improved reporting practices by some local educational agencies may have resulted in apparent increases in crime rates that may not represent actual increases in crime.

## Notes:

- Counties, school districts, and county offices of education with fewer than 1,000 students enrolled are not included on this table. See Appendix D for data on all local educational agencies.
- Because of space constraints, the following crimes, constituting 3.2 percent of the total crimes reported, are not included on this table: bomb threat (348), destructive/explosive devices (548), homicide (4), and loitering/trespassing (1,884).
- When drawing conclusions from individual rate changes, remember that improved reporting practices by some local educational agencies may have resulted in apparent increases in crime rates that may not represent actual increases in crime.

## Notes:

- Counties, school districts, and county offices of education with fewer than 1,000 students enrolled are not included on this table. See Appendix D for data on all local educational agencies.
- Because of space constraints, the following crimes, constituting 3.2 percent of the total crimes reported, are not included on this table: bomb threat (348), destructive/explosive devices (548), homicide (4), and loitering/trespassing (1,884).
- When drawing conclusions from individual rate changes, remember that improved reporting practices by some local educational agencies may have resulted in apparent increases in crime rates that may not represent actual increases in crime.
